

## HTML Basics-II

### Tables

Diagram illustrating the structure of an HTML table:

- `<table>` (The entire table structure)
- `<tr>` (A single row)
- `<th>` (Table heading)
- `<td>` (Table data)
- `<thead>` (Table heading section)
- `<tbody>` (Actual content section)
- `<tfoot>` (Table footer)

Sub	Sum 1	Sum 2
Eng	2	5
Min	6	9
Mth	10	12
Total	18	26

(1) ✓ `<table>` → table tag

(2) ✓ `<tr>` → table row

(3) ✓ `<td>` → table data

(4) ✓ `<th>` → table heading (bold)

To add Border :- (From CSS)

`<style>`

table, tr, td, th {

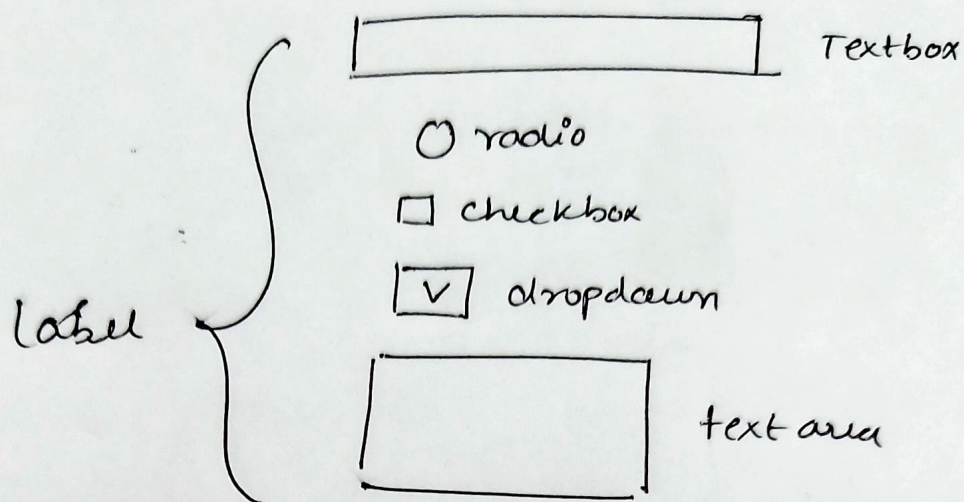

border: 1px solid black;

border-collapse: collapse;

`</style>`

## Forms in HTML :-

`<input type = "text">` For text

`<input type = "radio">` For radio

`<input type = "checkbox">` For checkbox

`<input type = "password">` For password

`<label for = "user" > Username : </label>`

`<input type = "text" name = "user">`

↳ Username:

✓ `<label>` is used For the text related to the type we are using For input.

✓ `<form action = "https://...">`

↑  
when button is clicked this action is performed

`<input type = "submit" value = "Submit">`

Submit Button Creation.

→ value/text inside Button.
